GRINDING PARTS CURRENT FLOW CHART

Issuance P.O → Loading Plan → Set-up & Qualification → Mass production → Rework & Visual → QVPAK programming → 100% inspection using QVPAK → Packing → Shipment

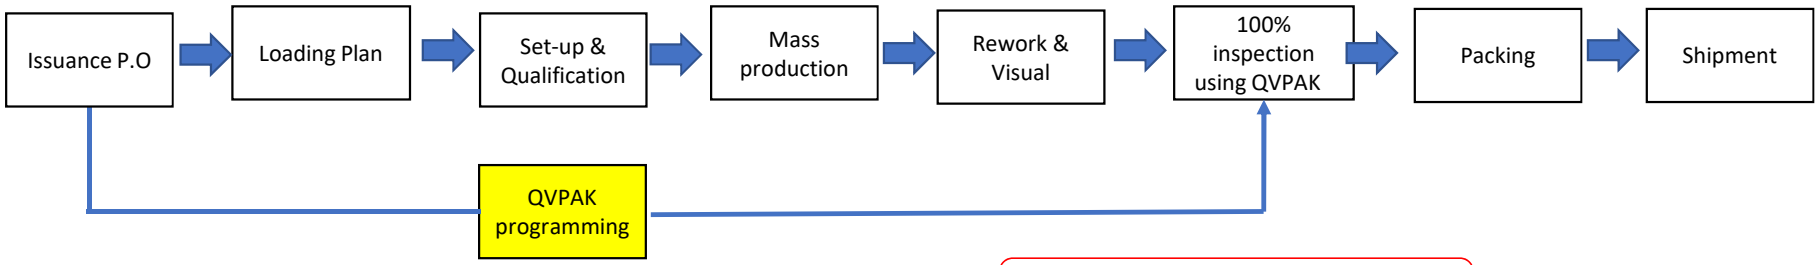

DISADVANTAGES

- Its takes 1hr to create a program per devices.
- Grinding creating a 6 QVPAK program per a day that equivalent 6hrs everyday.
- Making a program will just start when the actual parts is receive.
- Having a 1 machine its hard for engineering team to create a program immediately while the machine is using for production.

GRINDING PARTS FLOW CHART AFTER INSTALLATION OF PROPOSE QVPAK ADDITIONAL PROGRAM

QVPAK with EASYPAGPRO software

- QVPAK with EASYPAGPRO software is using DXF file in creating program . With this software can be done in advance even without or while waiting for the actual parts.

ADVANTAGES

- Advance making the program and this eliminates 6hrs a daily in line program making.
- It can do programs more quickly than current programming set up of QVPAK.
- we can create program even before the product produce in machine.
- There will be no interruption on the on-going 100% inspection of QVPAK since programming can also be done in another PC.
